

Baldor•Dodge Para-Flex Couplings

Para-Flex QD Bushed Flanges

With over 50 years of history and development, the Baldor•Dodge Para-Flex has experience providing reliable solutions in a wide range of industries and applications. With the addition of Para-Flex QD bushed flanges, Baldor•Dodge offers customers the highest number of shaft attachment methods in the market.

Offering a greater bore capacity than competitors, Para-Flex QD flanges allow customers to save money by downsizing their coupling selections. QD bushings allow for easy installation and removal with minimal shaft damage, reducing maintenance time and costs. Para-Flex QD flanges are also available in the largest range of sizes in the market, allowing customers to realize the benefits of this “Problem Solver” coupling in the widest range of applications.

Baldor•Dodge Para-Flex Elements

Superior Design Provides Advantages over other Rubber or Polyurethane Elements

Baldor•Dodge Para-Flex elements are manufactured with reinforcing fabric tension cords that transmit much of the torque during operation and offer a wear indicator to the user when the element should be changed out. Uniform and centered beads in the foot of the tire element prevent it from pulling out during operation. Additionally, the tire element is reinforced at the split to reduce fatigue and extend life.

Industry Leading Misalignment Capabilities

Baldor•Dodge Para-Flex elements provide accommodation of shaft misalignment during installation, operation, and replacement better than other elastomeric elements. With an industry-leading combined 4° angular, 1/8” (3.17 mm) parallel, and 5/16” (7.93 mm) end-float capability, Para-Flex couplings will perform in difficult applications and reduce valuable time needed for installation and maintenance.

Baldor•Dodge Para-Flex couplings carry an industry-leading 5-Year Limited Warranty.

Torsionally Soft Rubber Protects Connected Equipment

The flexible design of the Baldor•Dodge Para-Flex element is crucial in preventing damage to connected equipment in harsh-running environments. The torsional softness is instrumental in damping vibrations and absorbing shock loads to the system.

Complete Para-Flex QD coupling consists of one element, two flanges, and two QD bushings (see next page).

Notes:

⁽¹⁾ Neoprene element ratings are the same as the standard natural rubber element ratings. (Green sticker or painted mark)

⁽²⁾ Cordless elements have an average static torsional stiffness 25% of the standard element and approximately 25% of the torque rating. (White sticker or painted mark)

Indicate selections where Dodge has a coupling size advantage versus competition.

NOTE: 1) All selections assume that the driven hub bore size will be equal to or less than the motor shaft diameter.

Indicate selections that exceed competitor's product offering.
